

NAME:SARAH MONGARE
ADMISSION NUMBER: 133834
MULTIMEDIA APPLICATIONS
WEBSITE PORTFOLIO
SUBMITTED TO: DR. VICTOR MAGETO

Design Choice:

1. Visual Appeal: To create an aesthetically pleasing portfolio website, I opted for a clean and modern design with a focus on minimalism. I chose a color palette that compliments the content and enhances the overall visual experience.
2. User-Friendly Navigation: I prioritized intuitive navigation to ensure that visitors can easily explore the website and access different sections. I implemented a clear and organized menu structure, allowing users to navigate seamlessly between projects, about me, and contact information.
3. Showcase Projects: The main goal of the portfolio website is to showcase my work effectively. I carefully selected project highlights and organized them in a visually appealing manner, emphasizing key features, technologies used, and outcomes achieved. I incorporated high-quality visuals, such as images, videos, and interactive elements, to engage visitors.

Challenges faced and how I addressed them:

1. UX/UI Optimization: Ensuring a seamless user experience was crucial. To address this challenge, I refined the navigation structure and simplified the user interface.
2. Showcasing Technical Skills: Communicating the technical aspects of my projects in a clear and concise manner presented a challenge. To address this, I utilized a combination of written descriptions, visual representations, and interactive elements by attaching a link to the various projects.
3. Contact and Call-to-Action: Encouraging visitors to get in touch and take action was essential. To address this, I placed clear and prominent contact information throughout the website, including a dedicated contact page with a contact form. I also incorporated strategically placed call-to-action buttons and prompts to guide visitors towards engaging further with my portfolio and services.
